Wireless-N Access Point

Linksys Wireless
Access Point
Multi-purpose
WAP300N
Dual-Band N300

The Linksys Wireless Access Point with dual band can be used to create a new wireless network, or upgrade your existing one to wireless-N performance. It can also be used as a bridge to join multiple networks together, as a media connector to connect devices such as HD TVs, games consoles and other internet enabled devices to your network, or as a range extender, to expand the range that your wireless network can reach in your home.

Key features

- Upgrade your network to wireless-N
- Extend range for enhanced coverage
- Connect wired devices to your wireless network

Speeds up to 300Mbps

Provides fast wireless connectivity with transfer rates up to 300 Mbps, you'll enjoy a powerful networking experience for streaming video, sharing photos, or gaming online*.

Wireless-N with 2.4 or 5 GHz band

You can choose which band you set your access point to accommodate your devices on your network.

Media Connector Mode

Connect your HD TV or games consoles or Blu-ray player or other internet enabled devices to your network using the ethernet port.

Wall mountable

You can place this product wherever is convenient, even on the wall to save surface space.

Two detachable Antennae

The detachable antennae provide flexibility for increasing the range of your wireless signal in your home.

Customise your wireless network expansion with 3 additional modes

- Bridge: Wirelessly join multiple networks together**
- Media Connector: Connect one wired device to a wireless network
- Range Extender: increase existing wireless coverage

Push-button setup

The Wi-Fi Protected Setup™ button on your access point is designed to get you setup easily and more securely. Once the wireless connection to your router has been established, simply plug any wired ethernet device to one of the four ports and enjoy instant wireless connectivity.***

* Maximum performance derived from IEEE Standard 802.11 specifications. Actual performance can vary, including lower wireless network capacity, data throughput rate, range and coverage. Performance depends on many factors, conditions and variables, including distance from the access point, volume of network traffic, building materials and construction, operating system used, mix of wireless products used, interference and other adverse conditions.
** In wireless bridge mode, one WAP300N per wired network to be connected
*** Secure push-button setup works with devices that support Wi-Fi Protected Setup™ like Linksys Linksys E-Series and EA-Series routers, X-Series Modem-routers and others.
